

Support key technology recommendations from the UK Home Office CCTV Strategy

Use fewer cameras less reliant on CCTV infrastructures to protect larger areas of more locations

Provide reassurance for your residents and the ultimate deterrent to would-be offenders by  
having all your PTZ camera installations performing "manned" 24/7/365

Each single IMC installation automatically provides:

- Recognition evidence - 2m up to 147m in any direction
- Identification evidence - 2m up to 61m in any direction
- 67,800 square metres of simultaneous coverage to UK Home Office evidential quality guidelines

Viseum's Technology Partners present this patented breakthrough  
integrated into your central control room operations.

### Plug and Play Integration

Providing the best of both worlds where Viseum's machine-to-machine intelligent automation interplays with human vigilance. Have your Viseum IMCs zoom into and follow activity of interest so that your operators can watch your video wall spring to life for the very first time. Your camera operators can always seamlessly override Viseum's automation, but when they are too busy or simply unavailable and crimes are committed, high quality close up evidence will still get captured and the long term deterrent will always be sustained.

Viseum IMCs integrate seamlessly today with all major brands of digital or analogue CCTV control room equipment. I.e. the control of the PTZ uses the same standard 2 or 4 wire control room telemetry, and its live images are recorded and presented in just the same way as always, but with the added benefit of **a)** moving themselves to incidents of interest when your operators are unavailable, and **b)** having backup recordings stored locally to the camera of your PTZ and all fixed contextual view camera recordings.

To manage your IMCs using the Viseum Graphical User Interface, to watch all live contextual view cameras, interrogate recordings local to the camera, schedule surveillance profiles, and prioritise hot spots, all you need is a TCP/IP link and your standard work station using a standard web browser.

### Optional Digital Integration

All advanced Viseum IMC functionality is available today using the Viseum Graphical User Interface (GUI) in your control room. Using the most secure web based techniques, Viseum's Technology Partners present the following levels of this patented breakthrough digitally integrated into their equipment and GUI:

#### Level 1 | Smart Search Extended Dual Evidence | *Investigate incidents and find what you're looking for, faster*

The ability to connect to Viseum's remote onboard DVR from a central control room's workstation with its familiar user interface, to interrogate all recordings stored locally to the camera. Review your IMCs local recordings as an extension to your central control room's storage. Significantly reduce post-video interrogation time by using your fixed contextual camera views for a "Smart Search" capability to locate specific areas where close up evidence is required.

For backup storage or, primary use, and eliminating costly transmission, use your IMC installation to locally store its contextual view and close-up recordings. Benefit from extended dual evidence of any close up event using your IMCs fixed contextual view cameras. See the lead up to the event as well as the aftermath, for example who else witnessed it and where the suspect(s) came from and escaped to.

Viseum IMCs have been granted 20 years patent protection

**Any non-Viseum branded IMC system is either noticeably inferior or an illegal copy and in breach of International Law**

European Patent 1579399, International Patent Pending: PCT/GB 03/04691, PCT/GB2006/001414 Canadian Patent Pending CA2505340

**Level 2 | Advanced Evidence Storage Options | *Process your evidence for rapid convictions***

Once Viseum's locally stored recordings have been identified as evidence, it can be stored in the central control room in one of 2 methods to support particular organisations' evidence processes and "barrister proof" policies:

- Option 1** – Digitally integrated by the manufacturers of the central control room recording system, to be stored with all other evidence within your proprietary evidence locker.
- Option 2** – Digitally Integrated by your IT department using the universal digital CCTV viewing software package for Windows called SiraView. This was designed in association with the Home Office and major police forces to standardise the use of video evidence for criminal investigations and court convictions. Play all Viseum IMC camera views at the same time for complete detail of all events in the whole area.

**Level 3 | Live Contextual View Operator Vigilance | *Have eyes in the back of your head***

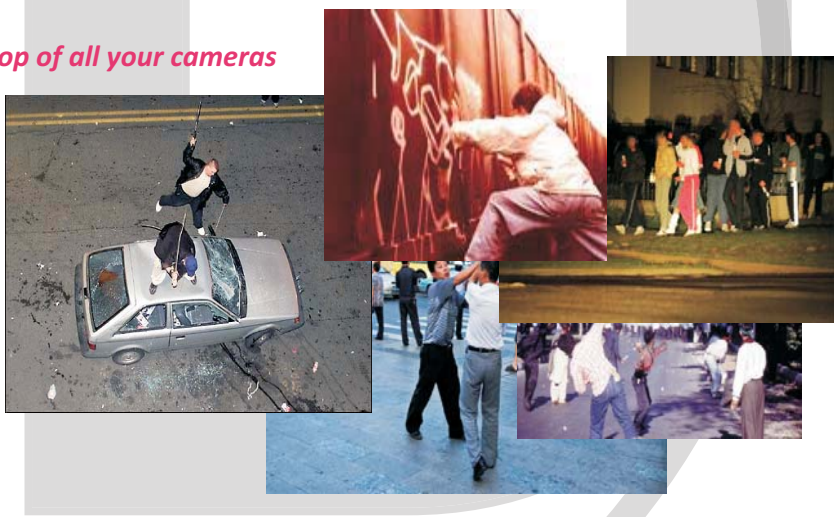

Use your IMC as a multichannel codec to avoid purchasing any single, multichannel or PTZ data control codecs, so delivering a more cost effective product which is easier to install and relocate. At the same time you are following a live event with your PTZ camera, watch any one of your IMCs contextual view cameras to see what else is happening in the whole area.

From your control room or securely via the internet, receive audio and visual alerts, and control your PTZ cameras in the normal way or even faster in emergencies with a touch on your screen.

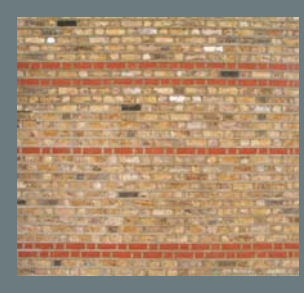

**Level 4 | Advanced Intelligent Automation | *Stay on top of all your cameras***

At the touch of your screen, programme your PTZ camera installations with local knowledge of specific areas, and times of day or week at which to expect crime. Prioritise certain areas over others, but remain automatically vigilant to include the many areas where random crimes could occur.

*"The only better deterrent would be having a policeman constantly there". Community Safety Warden*

**Conventional CCTV Infrastructures**

**Before Viseum** - when an operator is distracted or simply not available, crime is missed.

Most traditional moving cameras in your CCTV network are either left stationary, looking at nothing, or left on preset tours, which allows them to look at nothing in different places. Potential wrong-doers often assume that these are just not being watched.
