Viseum IMCs have been granted 20 years patent protection

Any non-Viseum branded IMC system is either noticeably inferior or an illegal copy and in breach of International Law

European Patent 1579399, International Patent Pending: PCT/GB 03/04691, PCT/GB2006/001414 Canadian Patent Pending CA2505340

Before Viseum IMCs

Moving cameras installed to monitor large open space, were supposed to provide effective coverage for the entire area. However, in reality they could only see a fraction at any one time.

Now we have Viseum IMCs

Viseum IMCs protect open spaces better than any other solution, by always seeing and recording in every direction at the same time. Moving the right cameras to the right places at the right times is no longer down to chance, or dependant on having surveillance specialists constantly monitoring the area.

Multiple events happening at the same time are taken care of by prioritising particular areas at various levels, or by having the moving camera switch between relevant activities to capture high quality close up evidence of everything.

Even more evidence is also provided from Viseum's wide view detection cameras as recommended by the UK Home Office. This catches criminals in the act, not only of the crime itself but also of the lead up to it as well as the aftermath.

CCTV DVR Camera Controllers

Customised embedded computer - various models installed either outside or inside the camera pole to suit requirements.

Driven by Viseum's Virtual Operator Assistant software.

Includes Viseum Auto-intelligent Digital Video Recorder (AiDVR) for primary or backup storage.
