

WISEUM UK PRESENTATION

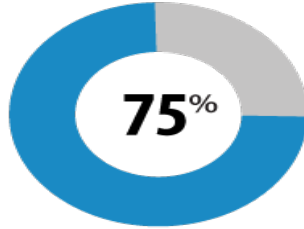

MAJOR SECURITY PROJECT
ON-TIME COMPLETION MANAGEMENT

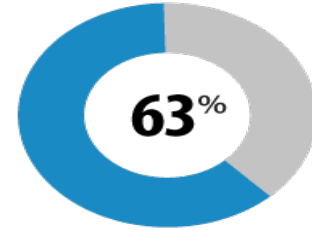

The problems with major construction projects

35-65% of time is wasted validating information .

Construction projects are behind schedule.

Construction projects are over budget.

The source of the problem

Recent study proved - the stakeholders, planners, designers, suppliers, the main contractor and sub contractors all use isolated (separate) project delivery systems, to deliver the same project.

THE SOLUTION TO THE PROBLEM WITH MAJOR PROJECT DELIVERY

Trusted single-source global management system

Reduce Risk

Streamline projects with better resource management. Research indicates companies cut production length by 40-60%.

Reduce time

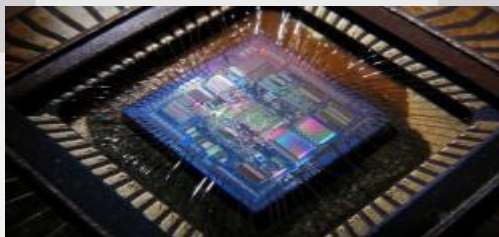

Streamline projects with better resource management. Research indicates companies cut production length by 40-60%.

Increase accuracy

Real time synchronization through a centralized data repository. Improve precision through immediate data validation, live monitoring and asset tracking.

Increase revenue

Reduce operating costs to improve profit margins. Studies show businesses lower expenditure by 35-55%.

How it works – capture information

- Viseum UK delivers major security projects using the world's only single-source global asset management system. This is a trusted and secure live online software system incorporating processes to solve all of these problems.
- This software system is synchronised to the entire project supply chain's proprietary systems to schedule project deliverables, manage equipment assets and control any project design change.

Maps

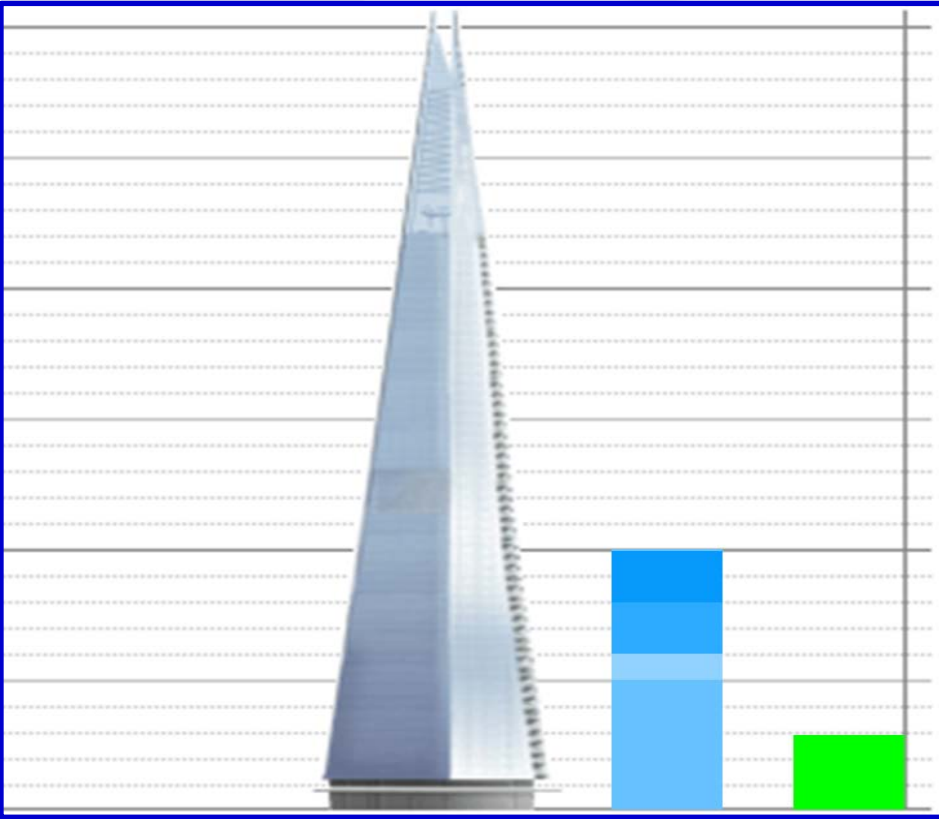

Project example

1. Once a major security project has been identified (\$20m+), Viseum engineers meet and train the main stakeholders and all members of the project supply chain.
2. Each member's proprietary systems (from CAD/scheduling/asset management systems, to in-life PSIM systems, etc.) are then securely integrated into Viseum's trusted single-source global management system.
3. All members then learn with pinpoint accuracy how to better understand their assets' lives within the project; from design, through delivery, to in-life operation.

Proven to deliver a major public security event for London 2012

Project results example

£435,000,000

Example project cost

£142,000,000

Value of security assets to be managed

£42,000,000

Savings with better asset awareness during installation
